

Northpeak Cold Chain

Northpeak sells predictive spoilage-prevention sensors to US regional food distributors, reporting 14 paying customers, 118% net revenue retention and a 31% pilot spoilage reduction while raising a \$4.0M seed SAFE.

Paying customers	Net revenue retention	Spoilage reduction	Seed raise target	Remaining to raise
14	118%	31%	\$4.0M	\$3.4M
As of deck [S4]	Trailing 12 months [S4]	6-month pilots [S3]	Current round [S8]	Current round [S8] calc.

PROBLEM

US regional food distributors lose perishable inventory to temperature excursions. Existing data loggers detect excursions only after product is lost.

- **4-6%** Perishable inventory lost (2025) [S2]
- **\$3.6M** Typical annual spoilage write-offs (Annual) [S2]
- **\$180M** Typical customer revenue (Annual) [S2]
- Existing data loggers report excursions after the fact, when product is already lost. [S2]

Not provided: Independent data on spoilage rates; Survey methodology and respondent profile

SOLUTION

Wireless sensors plus prediction software warn warehouse staff before temperature excursions. The system needs no changes to existing refrigeration.

- **31%** Spoilage reduction (6-month pilots) [S3]
- **~6 hours** Alert lead time [S3]
- Installs in one day per warehouse. [S3]

Not provided: Number of pilots behind 31% result; Pricing per customer or warehouse

TEAM

The founders combine food distribution operations experience with IoT engineering. A sales leader has not yet been hired.

- **Dana Whitfield**, CEO — Former VP Operations at a regional food distributor (12 years). [S7]
- **Ravi Menon**, CTO — IoT engineering lead; 2 prior startups, 1 acquired. [S7]
- The Head of Sales role is open (hiring). [S7]

Not provided: Head of Sales; Total headcount

TRACTION

The company has paying customers, active pilots and letters of intent from national grocery chains. Quarterly ARR grew through each of the four reported quarters.

- **14** Paying customers (As of deck) [S4]
- **118%** Net revenue retention (Trailing 12 months) [S4]
- The ARR chart shows \$0.45M (Q3 2025), \$0.68M (Q4 2025), \$0.95M (Q1 2026) and \$1.2M (Q2 2026). [S4]
- There are 5 additional pilots in progress, which are not paying customers. There are also 3 signed letters of intent from national grocery chains, which are not contracts. Speaker notes say pilots convert to paid after 90 days on average. [S4]

Not provided: Recognized revenue (historical); Pilot-to-paid conversion rate

MARKET SIZE

The company sizes a global TAM from a third-party report and a US SAM bottom-up from distributor counts and budgets.

- **\$9.4B** TAM (Global, 2026, Third-party industry report (unnamed), global cold-chain monitoring market) [S5]
- **\$1.1B** SAM (US regional food distributors, Bottom-up: 2,600 distributors x \$420K annual spoilage-prevention budget) [S5]
- *Analyst view:* The SAM arithmetic checks out: 2,600 x \$420K = \$1.092B, which rounds to \$1.1B. [S5] calc.

Not provided: SOM; Name of third-party TAM report

COMPETITIVE ADVANTAGE

Northpeak positions predictive alerts against after-the-fact logging. It backs this with pending patents and a large proprietary sensor dataset.

- **2** US patents pending (As of deck) [S6]
- **3.2B** Training sensor readings (As of deck) [S6]
- The excursion-prediction model is trained on readings from customer sites, giving a proprietary data asset. [S6]

Not provided: Named competitors and comparison; Prediction accuracy or false-alert rate

FUNDRAISE

The company is raising a seed round on a SAFE. Angel money has been received and further interest is soft-circled.

- **\$4.0M** Seed raise target (Current round) [S8]
- **\$0.6M** Cash received (Current round) [S8]
- **\$3.4M** Remaining to raise (Current round) [S8] calc.
- The instrument is a SAFE with a \$16M post-money valuation cap. [S8]

Not provided: SAFE discount or other terms

USE OF FUNDS

Spending is weighted toward product and go-to-market. The company targets an 18-month runway from the raise.

- **18 months** Runway (Post-raise) [S9] **FORECAST**
- Allocation: Product & engineering **40%** · Sales & marketing **35%** · Operations **15%** · G&A **10%** [S9]
- \$3.5M ARR by end of 2027 (projected). [S9] **FORECAST**

Not provided: Current monthly burn; Existing cash balance

EXIT

The deck does not state an exit strategy.

Not provided: Stated exit strategy; Comparable transactions
