

# Northpeak Cold Chain

- Real-time spoilage prevention for regional food distributors
- FICTITIONAL SAMPLE: Northpeak Cold Chain is an invented company. All names and figures are made up.

# The problem

- US regional food distributors lose 4-6% of perishable inventory to temperature excursions (Northpeak survey of 40 distributors, 2025).
- A typical customer: \$180M annual revenue and \$3.6M in annual spoilage write-offs.
- Existing data loggers report excursions after the fact, when product is already lost.

# Our solution

- Wireless sensors plus prediction software that alerts staff about 6 hours before an excursion.
- Pilot customers cut spoilage by 31% over 6 months.
- Installs in one day per warehouse; no changes to existing refrigeration.

# Traction

- ARR: \$1.2M (June 2026)
- 14 paying customers; 5 additional pilots in progress
- Net revenue retention: 118% (trailing 12 months)
- 3 signed letters of intent from national grocery chains

# Market

- TAM: \$9.4B global cold-chain monitoring market (2026, third-party industry report)
- SAM: \$1.1B US regional food distributors (bottom-up: 2,600 distributors x \$420K annual spoilage-prevention budget)

# Why we win

- Predictive alerts versus after-the-fact logging
- 2 US patents pending on the excursion-prediction model
- Trained on 3.2 billion sensor readings from customer sites

# Team

- Dana Whitfield, CEO: former VP Operations at a regional food distributor (12 years)
- Ravi Menon, CTO: IoT engineering lead; 2 prior startups, 1 acquired
- Head of Sales: hiring

# The raise

- Raising \$4.0M Seed on a SAFE with a \$16M post-money valuation cap
- \$0.6M received from angel investors
- \$1.5M additionally soft-circled

# Use of funds

- Product & engineering 40% | Sales & marketing 35% | Operations 15% | G&A 10%
- 18-month runway
- Milestone: \$3.5M ARR by end of 2027 (projected)

# Financial outlook

- Current ARR: \$1.4M
- Projected revenue: 2027E \$3.5M, 2028E \$8.0M
- Gross margin target: 70%
